

1/10

this 'history' gives the last changes done, in the last 5 days or the last 5-10 changes, to the contact list.

Welcome page

(optional)

Continue button

On click closes current, opens new page

①

Search: Ex: name, company... Show list

contact

Filter

On click shows another input box with dropdown menu to choose specific data.

Render's page when clicked with any data as well

History Add

possible to select more

deletes selection

②

Search: Quick searches Show list

Name:

New Contact

Enter data:

name:

company:

Address:

Save delete Add

On click opens pop up

Adds to database and closes window

③

Search:

Company:

kat

Delete Activate Add

On double click (New window?)

④

Contact

Mr. John Smith

Mignos Manager

St Gallen

9011

Employee NR

Notes

Edit Delete Activate History

other buttons not visible by edit

⑤

Shows all history of contact since its creation. Any changes / notes.

All

in a table maybe?

Not sure how display date

(New window?)

⑥

Are you sure?

Yes No

Pop up

this one is tricky - maybe should only be visible when accessing one specific contact.

Unselect and closes window

delete selected

Activate / Deactivate depends on state

Select Buttons

Code

① Button - On click closes current window and open new page.

② ~~Search bar~~ grabs json file = if contains 'string' & ~~or strings~~
ShowListBtn: That are in input. show all results.
if one more filter ~~then~~ then: if contains 'string' and 'String' - show list.

filter btn: On click adds input field with dropdown menu and ☐ ☐ buttons.

☐ ☐ btn: On click adds - removes input field.

History: search box - goes grey and field down shows changes made to whole list (have to choose if days or per change) as list/table.

ShowListBtn: ~~Clicked~~ if Clicked and there is no input then renders whole list.

③ AddBtn: On click popup new window.

New window contains input text boxes for new contact.

Two more buttons (Save and delete) ¹. Closes window

↳ Adds information to database and activates the new contact automatically.

④ Btw navigation bar is fixed. ~~view~~ when showListBtn is clicked list view is rendered. Contacts can be accessed by double click. ² Select buttons by each row, so ~~if~~ more than one contact can be manipulated at the same time.
Delete btn when clicked pop up window appears - to confirm deletion.

Activate btn - not sunset

⑤^② On double click contact is accessed by opening new window, and ~~starts~~ blocking window nr 4.

Contact info is showed + 4 more buttons. Delete btn from previous window is reused.

Edit btn ~~can~~ enables writing. - rest of the buttons are replaced with SAVE - CANCEL buttons. ↳ updates data.

↳ Goes back without saving changes.

Activate btn - if statement.

⑥ History btn - opens new window and blocks previous one (this will help with the stability). Still do not know how to show the information, but all changes since creation of the contact will be showed.

... what is missing?
